Team Name: Tight Readers
Project: Music & Social: 9. Good Reads
Project Name: TightReads
Tech Presentation: React

Communication Channel: Slack

Team Members and Emails:

- Son Phan sphan010@ucr.edu
- Jonathan Ho jho047@ucr.edu
- Jonathan Oaks joaks001@ucr.edu
- Daniel Fonseca dfons007@ucr.edu
- Rocio Roman rroma004@ucr.edu

User Stories:

TightReads

Description: This project will be a web-based application that is based off the mobile app, Goodreads. GoodReads allows you to find and share books with other users. It also gives users recommendations. TightReads will be doing similar to this where you will be able to get recommended books and share books with other users on TightReads. You will also be able to see what other users are reading if you follow them.

1) As a user, I want to be able to rate books.
   - Books should be rated on a tightness scale with 1 being bad and 5 that was lit.
   - Books will have their own profile in which it will take the average of all of the book's ratings and display the average on the book profile.
2) As a registered user, I want to be able to login/logout of my account.
   - Be able to use the email and password you used to register your account to log into your account
   - Forgot password option. If you forget your password, you can send another password to your email you used to register the account.
   - As a registered user, I need to be able to log out of my account computers that aren't secure.

3) As an unregistered user, I want to be able to create an account.
   - People that want to create an account should be able to register and sign into their own personal profile
   - Account will be unique to the person and can only be accessible by signing in with private credentials.
   - Account will hold information about the user such as name, email, age, books the user has saved, etc.
4) As a user, I want to be recommended books based on my read/current books.
   - I want new books to read based on the books that I have read or I am currently reading.
   - I want this to be easily visible to me when I login.
5) As a registered user, I want to whitelist/blacklist authors or genres.
   - Whitelist highlights search results that contain the whitelist tags
   - Blacklist greys search results that contain the blacklist tags
6) As a user, I want to be able to get a shareable link to a book I want to share with a friend.
   - When looking at a book's profile using the webapp, I want to be able to get a shareable link for that book so I can share it with a friend
   - "Get link to share" button so others not necessarily on the site can be redirected onto the site
7) As a user, I want to search books based on title, author, genre, or rating.
   - Enter key entries such as title, author, genres, or ratings and be able to query all entries sharing these entries.
   - Be able to select which of the keys you want to search by opening up a drop down bar and then select from either title, author, genres, or ratings.
   - Example: Open drop down bar select author and then type in J.K Rowling. Now the user should see all books with the author J.K Rowling.
8) As a user, I want to be able to read a summary about a book
   - Don't judge a book by its cover, most books have titles that don't necessarily represent what they are about, so a summary about the book helps with the user perspective

9) As a registered user, I want to be able to add books to my favorite list
- User is able to add books to their favorite list. Favorite list is displayed on their profile.

10) As a registered user, I want to be able to view/edit my profile and other users' profile.
- As a registered user, I want to view/edit my basic profile, such as name, age, gender, location, status and a profile picture so others can learn more about me.
- As a registered user, I want to be able to set my profile to information I feel comfortable disclosing.
